Company Biography

Elite Pipeline Services (EPS) is a company focused on safety, and committed in providing a customer with all the needed services in buried pipe maintenance and inspection. Since the start of EPS, a strong emphasis has been generated in providing well maintained safety practices and elevated employee professionalism within the nuclear industry. Focusing on buried pipe services, EPS is driven to provide economical solutions to maintenance and inspection of all types of configurations.

Our inspections include CCTV video inspection and reporting, VT inspection and reporting as well as UT and Eddy Current NDE testing. In conjunction with inspections, EPS provides dewatering and water jetting services, allowing full internal inspections from crown to invert.

Our ability to provide internal inspections allows the customer an ability to record and analyze pipe integrity without large excavation projects. In conjunction with internal inspections, the maintenance and repair of the piping systems is important. EPS provides contingency repairs and planned maintenance, including coating applications, Seal installations and CIPP lining.

Safety and professionalism on the job site have been the two driving forces to lead EPS to the top, for pipeline solutions in the nuclear industry. Experienced and well trained employees provide these services in a manner other companies in the pipeline industry tend to ignore. EPS provides many solutions to buried pipe needs at a cost-effective, safe and professional approach
