

Preparation & Coatings

Elite Pipeline services all industries. These repairs include: tanks internal, tanks external, pipe internal, pipe external, concrete lining repairs, drains, floor coatings, chemical tanks, sumps, contaminated systems, water boxes, wall coatings, through wall Spools. Prior to any application, the substrate needs to have proper surface preparation for the desired coating. Surface preparation can be in the preferred form of Abrasive Blasting. Other alternate forms are grinding, bristle blasting, jetting and hydrolazing which are all services that EPS provides.

Elite Pipeline Services works in line with Nuclear Coating Standards and processes. It's along these Nuclear Coating Standards that we take to other industries. Our qualified coating technicians include service level 3 safety related qualifications and work directly in line with manufacturer and engineering guidelines. Elite Pipeline Services is also known as a proven leader in small diameter internal pipe coating.

Coating Repairs

Surface preparation is critical to proper coating repairs. EPS offers Chesterton's ARC ceramic reinforced epoxy, Enecon Epoxy systems, or EPS can apply specified materials to meet your needs and circumstances. Our Epoxy systems provide protection from erosion, corrosion, abrasion, chemical attack and cavitation.

EPS Specializes in Service Level 3 safety related coating applications in Nuclear power plant systems. We also provide the industry with coating solutions to meet the adverse environments they face every day. Each application is unique to its environment. Whether your lines are metallic or cementitious, EPS has a solution."
